

X-Ray Machines

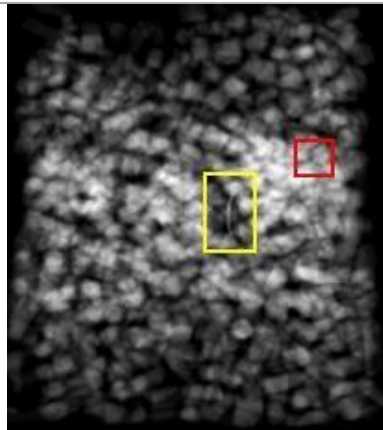

Safeline X-33 X-Ray Machine

The X-33 Series machines are intended for inspection of packaged products. These systems use a vertical view of the product.

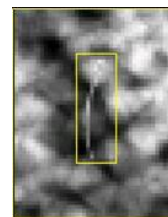

X-33 is optimized for the low intensity "soft-X-ray" energy range. When coupled with its unique high dynamic range detection system, unparalleled image discrimination is achieved. Construction is 100% lead free therefore eliminating any hazardous material consideration.

Find Glass and Metal in Frozen Vegetables

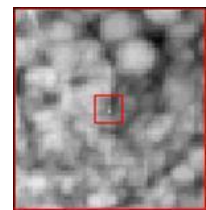

Finding small pieces of metal can be a daunting challenge for the best metal detectors and finding other material such as glass impossible. Our X-ray technology and processing software can find very small pieces of unwanted material with ease.

Safeline X-Ray equipment running on our conveyor machine successfully discovered these contaminants and removed the pouch at a conveyor speed of 200 ft/min.

1.0cm piece of stainless steel wire

1.0mm sphere of glass
