

2000B Stretch Wrap System

The Eagle 2000B stretch wrapper features a powered film carriage with up to 250% film pre-stretch. Using an electronic photo eye, the Eagle 2000B automatically recognizes load height and adjusts carriage travel. The turntable offers a soft start and stop feature to ensure gentle handling of the load being wrapped. The turntable resets itself automatically upon completion of each load. The available features provide for increased production and minimized cost per load that can easily justify owning an Eagle 2000 series stretch wrapper.

- Semi-automatic or manual operation
- Powered pre-stretch (250%)
- PLC (Programmable Logic Controller)
- LCD display with integrated controls
- Handles pallet load profiles 'A', 'B', and 'C'
